The countdown to the opening of the digital platform is on

The Stuttgart Exhibition Centre is breaking new ground with the first R+T digital. R+T – the world's leading trade fair for roller shutters, doors and sun protection – is extending its range of products and services into virtual space and, in this context, is designing a hybrid event format: From 22 to 25 February 2021, the participants of R+T digital will have the opportunity to present newly developed product innovations on an international platform and to transfer knowledge across the industry. 300 exhibitors from 23 countries are taking part in the R+T digital. 105 registrations, i.e. 37 percent, come from German exhibitors, more than 63 per cent result from international participation. Besides Germany, the top exhibiting countries are Italy, China, Spain and Turkey. But there are also some exhibitors from France, Poland, Belgium, Switzerland, Austria, the Netherlands, the Czech Republic and South Korea. The format will be supplemented by hybrid fringe

After registering online, visitors can find all events and exhibition halls digitally via the R+T foyer.

events that will be streamed digitally online on the R+T platform as well as held on site in Stuttgart. "With the R+T digital, we want to give our exhibitors and partners access to our worldwide visitor network, so that the new products developed for 2021 can be presented in detail within this framework. This is our overriding goal for the R+T digital. For this reason, the presentation of the R+T Innovation Award is at the heart of the event concept," says

Sebastian Schmid, Head of the Technology department at the Stuttgart Exhibition Centre. "Digital event formats will not and cannot replace live fairs. The R+T is and remains the highlight event in the RDS industry. With the R+T digital, we have developed a new format to complement the physical gathering at the R+T 2022 in Stuttgart, with the aim of bringing the industry together virtually as early as 2021."

Connecting real and digital worlds in a meaningful way

Mr Bleinroth, where do you see yourself as Stuttgart Exhibition Centre in the field of tension between digital trade fairs and their competitors such as BAU or Fensterbau Frontale?

Roland Bleinroth – At this point in time, we see digital trade fairs as a necessary solution to stay in touch with our community and to offer attractive content online via topics such as the Innovation Award, match-making, live lectures and virtual exhibitions. It is not enough just to organise the above-mentioned points individually. Visitors must also be able to find information that they were not looking for. That is the challenge.

Mr Schmid, over exhibitors sounds very positive. Are you satisfied?

Sebastian Schmid – I am very impressed by the great response from the industry. With

CEO Roland Bleinroth and Head of Technology Sebastian Schmid see R+T digital as a useful complement to World's leading trade fair R+T in Stuttgart.

regard to R+T digital, it was particularly important for us to be able to meet the expectations regarding internationality and product diversity of a R+T. We are all the more pleased that

we can keep this promise to our visitors.

23 Exhibitors from over countries are taking part. Under <https://bit.ly/3s7XxVL> you will find the whole interview.

Voices on R+T digital

„For us as a trade, it will first of all be an interesting experience to use digital media more intensively than ever before. I'm already looking forward to not having to carry catalogs this time and to being able to cross the R+T platform on the mouse pad, so to speak. I am very excited about the live formats Gastronomy Day, Innovations Day and Smart Home Forum, in which we as an association are involved ourselves. At the panel

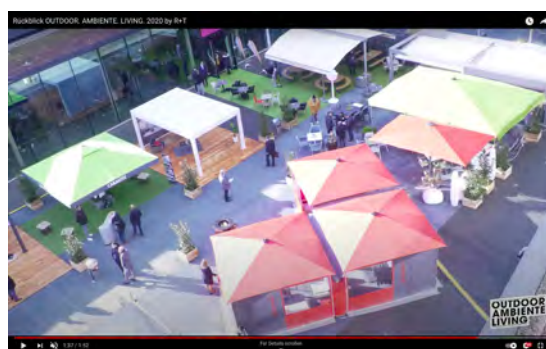

Heinrich Abletshauer is BVRS President.

discussion with ZDH President Hans Peter Wollseifer, Minister of Justice BW Guido Wolf and DEHOGA BW Chairman Fritz Engelhardt, we will primarily discuss from the perspective of the skilled trades how we can support outdoor gastronomy to create safe and comfortable guest areas with sun and weather protection, thus calling for a rapid opening of the gastronomy sector“.

Gastronomy day

The terrace is becoming an increasingly important part of the catering industry. However, getting the most out of it is a challenge because guests want to sit outside as long and as often as possible. Therefore, solutions must be found from the first rays of sunshine in spring to the showery days in autumn. Especially in holiday regions, the aim is now to use the terraces all year round. Consequently, there are plenty of topics for presentations and discussions on the Gastronomy Day at the R+T digital. “The

There are many possible solutions for gastronomy spaces. Sun-Sails, Awnings and Umbrellas are also used here.

Unfortunately, we will have to do without an outdoor exhibition this year, as we did in 2020. But from 19 to 23 February 2022, the special show OUTDOOR. AMBIENTE. LIVING. will be held once again.

feedback from visitors shows that we have accurately gauged the times with the special show,” says Sebastian Schmid, Head of the Technology department at the Stuttgart Exhibition Centre and initiator of the format. “With this success, we are taking an important step towards strengthening the brand OUTDOOR. AMBIENTE. LIVING. and to further establish it in the market.” INTERGASTRA project manager Markus Tischberger is also convinced by the concept. www.rt-expo.digital

Innovation awards to be presented Tuesday

In 2021, company spokesperson Stefanie Kromer will again host the Innovation Award ceremony.

The best entries will be selected at R+T digital and presented with their prizes at the official awards ceremony on 22 February 2021, which will be broadcast in a live stream, with the R+T Innovation Award. For the first time, several award winners per category can be honoured at this award ceremony with the Innovation Award in gold, silver and bronze. All win-

ners will be presented on the Tuesday of the fair on the Day of Innovations during an event moderated by jury members with video entries. The submission phase for the R+T Innovation Award ended at the end of October. This will form the heart of R+T digital in 2021. On the first live day, 22 February 2021, the winners will be determined in the final judging

and awarded in the evening at an exclusive hybrid awards ceremony. A total of around 100 submissions from 13 countries were accepted for pre-judging in all eleven product categories. This means that the submissions have been at a very high level.

www.rt-expo.digital

This is the coveted trophy of the Innovation Award, which will be presented online at a hybrid event on Monday evening at the ICS.

Voices on R+T digital

„I have known the R+T in Stuttgart since my childhood through our family business. All the more reason for me to look at R+T in Stuttgart from a completely different perspective this time as a digital version, and to be there live.“

www.itrs-ev.com

Sandra Musculus has been president of ITRS since November 2020.

R+T Platform based on three pillars

The concept of the R+T remains the same: Exhibitors present their new products to the international trade fair visitors while a varied programme of presentations will create knowledge transfer. In addition, the industry can exchange information and network online. The platform for the R+T digital is based precisely on these pillars. The Expo Area is home to the exhibitor showroom, which is divided into different product categories. In the respective theme halls, visitors can get an overview of the diverse innovations and new products. Moreover, there will be an Exhibitor Forum on the platform. Here, exhibitors can post 15-minute

web sessions in which visitors can find out about new products and the current global market situation.

In the Conference Area, specialist presentations will be broadcast live throughout the event with reference to current key topics in the industry (gastronomy, innovations, building trade, architecture), most of which will be implemented as hybrid events. Even after the live event from 22 to 25 February 2021, the entire platform of the R+T digital, including the exhibitor booths and the programme of presentations, will be available for another year – until the R+T 2022.

www.rt-expo.digital

Where is the trend in Smart Homes heading?

“Connected life, living and working - opportunities for the trade” is the main theme of this year's Smart Home Forum at the R+T digital on 24 February 2021. From 2p.m. until 6p.m., the participants will speak and discuss live at the international Congress Centre in the Stuttgart Exhibition Centre. On this

occasion, the audience will be sitting in their office or home office for this hybrid event, and can actively participate in the question and discussion rounds online. What are the trends of the future, how will the trade deal with the Smart Home requirement in the future?

As in 2018, presentations and panel discussions will take place in Stuttgart with all speakers in real life. An 18 m wide stage ensures social distancing and compliance with Corona rules.

At the R+T digital, the Smart Home Forum will now be held on the Building Trade Day, and will take place in a hybrid format. This means that moderators, speakers and discussion participants will appear on an 18 m wide stage in the ICS at the Stuttgart Exhibition Centre, while visitors will participate exclusively online from their offices or home offices.

Aero Skye: built-in and retractable bladed roof

The Renson Aero Skye is a bladed roof which can be perfectly integrated in existing or new buildings. Unlike an attached patio cover, this bladed roof can be seamlessly integrated into a cantilever or a spur of the roof above the terrace, one with the house.

In terms of look & feel, this will give you a unique picture, where indoors and outdoors blend perfectly into

each other. The tiltable blades always ensure the most pleasant living climate on your terrace, all year round.

You can close the aluminium blades during a rainstorm, open them whenever you want for the right amount of sun or shade, and even slide them to the side..

Larger sizes by virtue of new drive technology

The markilux pergola range has been expanded by the addition of the new „stretch version“. The toothed belt-driven operating system makes it possible to offer even larger sizes. In combination with waterproof (for purpose) covers, it also offers protection against rain.

Patios in private gardens have been turned into „Lounge“ areas which can be used all year round. In this context, large awning systems offer sui-

table protection against both sun and rain. But in the hospitality sector, too, they are finding a lot of favour. This is because these systems create an area in the open air where guests can sit comfortably at almost any time of the day or year. It is for this reason that markilux has expanded its range of products with the „pergola stretch“. It offers all-round weather protection in impressive dimensions.

„Our ‚pergola‘ has sold well to both private and commercial customers for a number of years; Be it in the standard or in the smaller compact version. In the ‚pergola stretch‘, we are offering a model of superlatives“, explains Michael Gerling, Director of R&D and Production. Impressively, a single unit can cover an area of up to seven by seven metres. Moreover, several units can be linked together to cover an area of 25

by 7 metres, which according to Mr. Gerling really shows what it is capable of.

Each individual unit is driven by its own, radio-controlled motor. What is unique about the

„stretch version“ of the pergola is its innovative toothed belt-driven gear system. According to Mr. Gerling, this allows ideal transference of the drive force to the mechanics of the cover support system.

Together with the electronics for the lighting and heating options, the gear mechanism is to be found in the front housing. The drive is connected to a toothed wheel in the guide tracks and pretensioned in the

factory. If required, the specialist dealer is able to increase the tension slightly, on site. And the changing of a motor, too, is also easily carried out, as this is readily accessible via a maintenance louvre in the housing.

Roller shutter Protex 2.0

In addition to simplified assembly of the box and installation on the window, the developers at Deceuninck placed particular importance on a new type of plaster and structural solution for brackets and center bearings in PROTEx 2-0. The innovative system with optional patented clip connection makes a fast, simple and standard air-tight assembly possible.

The Protex 2.0 plastic roller shutter system from Deceuninck delights professional users with a well thought-out installation concept, while end users and architects benefit from the increased airtightness: the optionally available, patented clip system does away with the need for screws altogether.

It is obvious that this considerably reduces the effort required for installation. The profiles of

The Protex 2.0 roller shutter box is suitable for quick installation thanks to screwless patented clip connection. Its clear design language meets the requirements of a modern design.

the new box are connected to the headers by the recesses. These are punched or simply integrated in the machining center. The components are joined together airtight as standard. Energy-saving living can thus be achieved without additional measures such as

specially applied sealing pads or the addition of silicone. The new solution is simply snapped on - this means that the Protex 2.0 roller shutter system can be installed extremely flexibly with both horizontal and vertical elements.

www.deceuninck.de/protex2

Protex 2.0 is available as a plaster box in two different sizes on request, this allows a high degree of flexibility for various installation situations.

A perfect start into the outdoor season

Have a perfect start into the upcoming outdoor season with the new Bella Lamella by Reflexa. The new slat roof will be available in April 2021. Opening the slats is possible up to 110 degrees for a perfect atmosphere at every time. It is 100% waterproof and keeps up weight of 112 kg/sqm.

At the virtual Reflexa stand you can inform about this tough and brand new all-weather solution. Visit us to get in touch with one of our product experts. Reflexa is also part of the R+T Innovation award and nominated with two products this year. Let us show you our innovative spirit and visit us. And don't miss the chance to win one of three Apple iPads.

www.reflexa.de/terrassendach

Warema Lamaxa L50 – Modular roof system with aluminium slats, fabric or glass roof

The slender roof system Lamaxa L50 offers even greater variety to create unique outdoor spaces. It has a striking design

with a slim crossbeam and poles. One special feature of the new Lamaxa L50 is the motor, which has been integrated into the pivotable aluminium slats

to create a seamless look. Warema also offers the Lamaxa L50 Tex with a fabric roof that comes in different versions as well as the Lamaxa L50 View with a glass roof.

The modern roof system is suitable as a free-standing option, can be connected to a wall or used in series-mounted units and star systems. With this innovation Warema has positioned itself as a full-range provider of roof systems made in Germany.

Lateral weather protection, surrounding LED lighting and radiant heaters allow the roof

system to be used in cooler weather or darkness.

All functions can be conveniently controlled via tablet or smartphone using WMS Web-Control pro.
